

SECURE eSIGN

ValidaSign

The zero-subscription electronic signature utility.

validasign.com

OVERVIEW

ValidaSign is a pay-per-document e-signature platform that eliminates subscription fatigue. Upload a PDF, add signers, and send — ValidaSign embeds a cryptographically-secured audit record onto every page the moment a signature is applied.

No subscriptions, no complicated setup, no templates to configure. Available in English and Spanish with a full Partner API for white-label integration.

KEY CAPABILITIES

What sets it apart.

Cryptographic Audit Trail

Every signed page includes a tamper-evident security stamp with signer identity, IP address, timestamp, and certificate hash.

Sequential Multi-Signer

Supports ordered signing workflows — each signer is notified automatically when it's their turn.

Partner API

RESTful API at `/api/public/v1/` for server-to-server document dispatch, status polling, and download. Built for platform integrations.

Bilingual Platform

Full English and Spanish versions with independent SEO — every public page, blog post, and legal document in both languages.

HOW IT WORKS

Three steps.

01

Upload your PDF

Drag and drop or select any PDF document.

02

Add your signers

Enter names and emails. Multi-signer? They sign in order.

03

Send and track

Signers receive an email, sign from any device, and you get the completed PDF with full audit trail.
